# PUBLIC HEALTH DEPT REPORTS COLLECTION COPY

COUNTY BOROUGH

OF BRIGHTON.

# Annual Report

OF THE

# MEDICAL OFFICER OF HEALTH

AND

# SCHOOL MEDICAL OFFICER

FOR THE YEAR 1922.

#### BRIGHTON

The Southern Publishing Co., Ltd., 130, North Street.-M.8493.

Health Department,

Town Hall, Brighton.

19th May, 1923.

LADIES AND GENTLEMEN,

I beg to present the Health Report for the year 1922. I would draw your special attention to the information given with regard to Housing. During the year a desirable suburb has been completed at Moulsecoomb and the first steps have been taken to deal with a small part of a slum area.

The Council will note with satisfaction that infantile mortality and the incidence of infectious disease in Brighton remains below that of the country generally.

During the year the Health Department suffered a great loss through the death of Chief Inspector Skinner, who had worked in this department for 42 years; one cannnot speak too highly of the work he did for Brighton.

I am,

Yours obediently,

Duncan Forbes,

Medical Officer of Health.

#### Thealth Committee:

Chairmen MR. COUNCILLOR MAJOR (until Nov., 1922).
MR. COUNCILLOR PARRY (from Nov., 1922).

HIS WORSHIP THE MAYOR.	Mr. Councillor	JACKLIN.
Mr. ALDERMAN BURBERRY.	,,	MAJOR.
,, ,, LINTOTT.	97 11	MANSFIELD
Mr. Councillor BLACK.	"	MARSH.
Mrs. ,, BLATCH.	,, ,,	MATTHEWS
Mr. ,, ELLIOTT	,, ,,	S. C. THOMPSON

#### Children's Care Sub=Committee:

Chairmen MISS M. E. HEATHCOTE (until Nov., 1922).

MRS. H. GERVIS (from Nov., 1922).

His '	Worship TI	HE MAYOR.	MR. COUNCILLOR	WILKINSON.
MR.	Councillor	CANE.	Mrs. "	SMITH.
,,	19	MARTEN.	MISS M. E. HEAT	THCOTE.
3 2	**	STEERS.	MR. H. D. LON	G.
2*	,,	WARD.	Miss A. C. W. RI	CHARDS.

Maternity and Child Welfare Committee.

# Chairman - THE CHAIRMAN OF THE HEALTH COMMITTEE.

THE HEALTH COMMITTEE (as above).

Mrs. BELCHER (died May 7th, 1922: vacancy not filled).

The Chairman of the Children's Care Sub-Committee

(Mrs. HEATHCOTE).

(Mrs. GERVIS, from Nov.)

Mrs. HUSSEY.

Mrs. NASH,

Mrs. C. SMITH

#### STAFF.

#### Public Health Department.

JAMES F. SKINNER, Cert.R.San.I., Chief Sanitary Inspector (until July, 1922). JOHN NORRISH, Cert.R.San.I., Chief Sanitary Inspector (from July). F. W. BRAYBON, Cert.R.San.I., Assistant Sanitary Inspector.

J. SHARP, Assistant Sanitary Inspector.

A. FRANKS, Cert.R.San.I., Assistant Sanitary Inspector.
A. L. VIGAR, Cert.R.San.I. and Food Inspector's Cert.R.San.I., Assistant Sanitary Inspector.

F. W. SALVAGE, Cert.R.San.I., Infectious Diseases Inspector.

J. BAKER, Disinfector. R. W. GRUTCHFIELD, Cert.R.San.I., Chief Clerk.

Four Assistant Clerks.

#### Factory and Workshops' Acts and Shops' Acts.

E. E. MILLS, Cert.R.San.I., Inspector.

J. WEBB, Cert.R.San.I., Assistant Inspector.

#### Superintendent of Public Abattoir and Food Inspector.

W. H. WATTS, Cert.R.San.I., and Food Inspector's Cert.R.San.I. One Assistant Clerk.

#### Tuberculosis Dispensary.

C. E. GREENFIELD, Cert.R.San.I., Inspector and Tuberculosis Visitor. One permanent and one part-time Clerk.

#### Health Visitors; Maternity and Child Welfare Work only.

Miss A. G. PALMER, C.M.B., Sanitary Inspectors' Cert., and Health Visitors' Cert. Miss E. WHYTE, C.M.B., Trained Nurse. Miss LOGIE, C.M.B., Trained Nurse. Miss F. E. HAYES, C.M.B., Trained Nurse.

#### Borough Sanatorium.

Matron :- Miss GRANT.

House Physician :- DANIEL HUGHES, M.B., B.Ch.

#### Tuberculosis Officer:

A. NEVILLE COX, M.D., B.S."

#### Infant Welfare Medical Officer.

Miss M. F. BIGNOLD, M.B., Ch.B.

#### Medical Officer of Health.

DUNCAN FORBES, M.D., B.Sc., D.P.H.

School Report follows.

#### STATISTICAL.

Population as estimated by the Registrar-General, 135,000.

Net Births, 2,278 { males, 1,156 females, 1,122.

Inward transfers, 59; outward transfers, 113 allowed for in above figures.

#### Birth Rate, 16.874,

Illegitimate children, 182 { males, 94. females, 88.

Births in Workhouse, 35 { legitimate, 6. illegitimate, 29.

Infantile Mortality, 67 per 1,000 the number of deaths under one year was 153, of these 26 were of illegitimate children.

Still Births, 82 { certified doctor, 62. midwife, 19. coroner, 1.

Deaths, 1,895  $\left\{\begin{array}{l}\text{males.} & 896\\\text{females,} & 999\end{array}\right.$ 

Inward transfers, 190; outward transfers, 213 (allowed for)

# Death Rate, 14.037 per 1,000.

 $\begin{array}{c} \text{Residents dying in} \left\{ \begin{array}{c} \text{Mental Hospitals,} \\ 83 \end{array} \right. \left\{ \begin{array}{c} \text{Brighton County Borough.} \\ \text{Mental Hospital, 74.} \\ \text{Others, 9.} \end{array} \right. \\ \text{Poor Law Institu-} \left\{ \begin{array}{c} \text{Brighton, 222} \\ \text{Shoreham, 36.} \end{array} \right. \end{array}$ 

Total Dying in Brighton Hospitals:-

Deaths in Private A Residents dying away from Brighton, 38. Houses, &c. Cleaths of Visitors to Brighton, 71.

#### INFECTIOUS DISEASES,

It is satisfactory to be able to report that the incidence of infectious disease in Brighton is well under that of England and Wales. The rate per 1,000 for Brighton as compared with England and Wales are, for Scarlet Fever, 2.44 as against 2.85 and for Diphtheria, 0.81 as against 1.37. The Enteric Fever incidence in Brighton is only one third that of the Country generally, but the puerperal fever rate is about the same due probably to a stricter notification.

	NOTIFIABLE DISEASE.	Diphtheria
		Diphtheria Scarlet Fever Enteric Fever Paratyphoid Erysipelas Puerperal Fev Cerebro-Spinal Acute Poliom Encephalitis I Ophthalmia N Malaria Dysentery Preumonia Pulmonary Tr Other Forms

Infectious Diseases Notified during the Year,

Diphtheria.—Fourteen deaths occurred from diphtheria, giving a percentage mortailty of 13. Patients do not die who receive antitoxin on the first day of disease. In severe cases, especially in children, each added day increases greatly the percentage mortality. In every case either parents or doctors are responsible for delay in securing the only specific treatment which is the administration of antitoxin. The following table is of interest in this connection:—

	,						
The day of disease Doctor called in.	Antitoxin first given.						
23	Not given.						
4	4						
3	5						
3	3						
2	5						
5	5						
2 ?	Not given.						
3	5						
3	3						
6	7						
2	3						

Scarlet Fever Return cases.—After the return home from the Isolation Hospital of 14 patients, further members of their families were infected: as 243 patients were admitted, the percentage giving rise to return eases is 5.8 per cent. In addition there was one home return case and one was probably infected from a child who had recently been discharged from a London Fever Hospital.

#### WHOOPING COUGH.

387 cases were notified in 217 houses; 4 deaths occurred.

#### MEASLES.

Measles.—The last big epidemic of measles in Brighton occurred in the year 1917. The average interval between these large epidemics is six years, but as the outbreak in 1917 was a year late, it was expected that an outbreak would occur in 1922 and 1923. A small outbreak occurred in St. Panl's School in March and April, but the real beginning of the epidemic was early in July. By December the epidemic had not reached its maximum. The remarkable feature is the mild character of the disease. Only two deaths occurred amongst 702 known cases.

Measles, notified chiefly by School Teachers, during 1922 were as follows:—

0— 3 mos.	• • •	 	8— 9 years	 	55
3— 6 ,,		 5	9—10,	 	16
6-9 ,,		 8	10—11 ,,	 	6

5-6,		 107	Total	 	702
6— 7 ,,		 133		_	-
7— 8 ,,		 105			

For School closure see School Report page 18.

Sixteen children were nursed by the Queen's Nurses; 245 visits were paid.

#### VERMINOUS PERSONS.

Scabres.—9 persons suffering from "the itch" had 19 baths.

In each instance an attempt was made to treat every infected member of the family. They were invited to go to the Infectious Disease Hospital, where they were bathed and treated. At the same time the personal clothing also the bedding were steam disinfected.

Apart from cleansing by the Poor Law Authorities no arrangements

have been made for the cleansing of verminous persons.

TUBERCULOSIS.

The table below gives statistics of Tuberculosis for 1922:—

Pulmonary Tuberculosis	 	 		70	2940
Non-Pulmonary Tuberculosis	 	 	•••	50	3556
Total	 	 •••	••	120	6496

The home nursing is made the more valuable as the nurses employed have from time to time personal tuition from the Tuberculosis Officer at the Dispensary. A quarterly report is received from the Superintendent of Nurses, not only enumerating the patients visited but calling attention to their wants and the sanitary condition of the homes. For these services an annual grant of £300 is made by the Council to the fund of the Queen's Nurses, roughly at the rate of 11d, per visit.

Fifty-one (36 per cent.) of a total of 140 deaths from Pulmonary Tuber culosis occurred in the following public institutions:—

23 in the Brighton Poor Law Institution.

12 in the Sanatorium.

11 in the Brighton County Borough Mental Hospital.

2 in the Royal Sussex County Hospital.

2 in the Sick Children's Hospital.

1 in an Institution outside Brighton.

In addition to the above deaths, three deaths of Brighton residents, which were transferable to Brighton occurred outside the Borough, as detailed below:—

1 in a nursing home.

2 in private houses.

#### AFTER CARE.

The following are the amounts of money from the Hedgcock Bequest expended during the year in the home carc of tuberculosis cases:—

							£ s.	d.

Temporary hel							0 15	0
Loans							7 0	0

In addition to the above, bedsteads with bedding were lent to enable several patients to sleep alone. The number of bedsteads lent at one time averaged 14.

Pathological Examinations.—88 specimens, chiefly of sputum or urine, were examined at the Dispensary, when it was desirable to have an immediate investigation.

Lectures.—Dr. Neville Cox has given two series of lectures on tuberculosis to the Queen's Nurses. On February 9th a clinical meeting of the Brighton Branch of the British Medical Association was held at the Dispensary,

Voluntary Help.—We have continued to receive most valuable help at the Dispensary Afternoon Clinics from the following members of the St. John's Ambulance Association and the British Red Cross:—Miss Allen, Miss Bayliss, Miss Blockley and Miss Wright.

# THE CLUB ROOM FOR MALE CONSUMPTIVES.

The Club continues to fulfil its purposes, namely, to provide a centre of interest and enjoyment under open-air conditions for male consumptives and at the same time to obtain a voluntary segregation of patients. Instead of moping at home, spending time in libraries, public halls or public houses, these men can go to their Club, where they can enjoy the newspapers in the open-air, play cards, dominoes or have a game at billiards. 81 were members of the Club during 1922 and these attended 4,824 times on the 311 days the Club was open. It is not open on Sundays, Good Friday or Xmas Day. To add to its popularity, in May, Mrs. Hutcheson arranged for afternoon teas to be provided at the Club and has continued to superintend the arrangements. Our thanks are due to Dr. and Mrs. Hutcheson for continuing their work for the Club, also to the Daily Telegraph, Sussex Daily News, Brighton Herald, Tatler, Bystander and Sphere for gratuitous copies received, and to Mr. Frank Wood, Newsagent for the supply of copies of three daily papers free of charge.

#### A MUNICIPAL WORKSHOP.

A Workshop should be provided by the municipality where consumptives could work longer or shorter hours, according to their fitness; the provision of a workshop would benefit the consumptive by providing him with work under ideal conditions and would benefit the public by segregating the consumptives. Although the Ministry of Health would allow no grant on such a scheme this should not deter the Council from proceeding in the matter.

#### HEALTH WEEK.

A lecture, entitled "The Action of Open Air and Sunlight on Health," was delivered by Professor Leonard Hill, F.R.S., on Thursday, October 12th, at the Dome. The meeting was presided over by the Mayor, supported by Mr. Councillor Major, the Chairman of the Health Committee, many

members of the Council, medical practitioners and others.

The Dome was full, there being some 2,000 persons present. Al classes were well represented in the audience; it should be mentioned that 250 students from the Training Colleges attended; this is gratifying as it is most important that the teaching profession should be interested in health matters. This, the third Health Week Lecture, was interesting easy to follow and instructive.

#### BOROUGH ISOLATION HOSPITAL.

	Number of Patients suffering from the following Diseases:—														
	Number of Patients.	Scarlet Fever.	Enteric Fever.	Measles & German Measles	Diphtheria.	Cerebro-Spinal Fever.	Chicken Pox.	Mumps.	Erysipelas.	Phthisis.	Other Tuber- cular Diseases.	Emaciated Children.	Kept in after operations for Tonsils and Adenoids.	Other Diseases.	Total.

Of the above eases, 1 ease of diphtheria, 1 of scarlet fever and 20 of other diseases belonged to the Sanatorium staff; 1 ease of searlet fever, 1 of mumps, 1 of measles and 2 of ehicken-pox, a total of 5, were soldiers.

Three patients suffering from diphtheria, 1 from enterie fever, 3 from scarlet fever and 1, a doubtful case of eneephalitis lethargiea were admitted from outside districts.

The total number of weeks spent by all the patients in the Sanatorium was 5,637 weeks, as eompared with 7,125 weeks in 1921. Scarlet fever patients spent 1,673 weeks; diphtheria patients 542 weeks; enterie fever patients 4 weeks; measles patients 10 weeks; eerebro-spinal meningitis 2 weeks; mumps 2 weeks; erysipelas, 3 weeks; ehieken-pox, 4 weeks; phthisis patients, 2,083 weeks; other tubereular patients, 971 weeks; wasting children, 264 weeks; patients suffering from other diseases, 62 weeks; and patients kept in after operations for tonsils and adenoids, 17 weeks.

#### MATERNITY AND INFANT WELFARE.

The infantile mortality was 67 per 1,000. (Figure for England and Wales 77.)

#### THE MIDWIVES ACT, 1902.

During 1922, 46 midwives, 22 of whom were in private practice, notified their intention to practice in the area. Of the latter 5 did not engage in practice, and 5 were in practice for a short time only. Of the total 39 had passed a qualifying examination and 7 were in practice prior to the passing of the Act in 1901; of the latter, one is illiterate.

The number of visits paid to midwives was 59. To all private midwives living and practising in Brighton at least one visit was paid quarterly; 2-

<sup>\*</sup>In blood specimens—(1)—complete reaction; (2)—almost complete reaction; (3)—incomplete reaction; (4)—no clumping.

visits were made to the West Street Hospital and its branch for the inspection of midwives doing district work from these centres.

Number of cases occurring in which the Midwife ealled to her assistance a registered medical practitioner (Rule E. 20 and 22) is set out below:—

Medical help was called in on account of the following causes, as stated by the Midwife.	Private Cases.	Outside cases in connection with the Brighton and Hove Hospital for Women.	TOTAL
Pregnancy— Abortion Miscarriage Ante-Partum Haemorrhage	1 2 3		1 4 5
Labour— Brow  Presentation Breech  Prolapse of cord  Abnormal  Delay in Labour  Retention of Placenta  Rupture of Perincum  Post-Partum Haemorrhage	$\frac{1}{\frac{2}{2}}$ $\frac{1}{28}$ $\frac{11}{18}$ $\frac{18}{2}$	$-\frac{2}{2}$ 1 1 36 6 38 3	1 2 3 1 64 17 56 5
Lying-in Period— Rise of Temperature Other reasons connected with mother	1 15	32 12	33 27
Condition of Infant— Premature Birth Condition of Baby Discharge from eyes	6 10 7	11 42 41	17 52 48
Other notifications (Rule 22)— Proposal to substitute artificial for breast feeding Death of child Still birth	8 5 15	10 1 14	18 6 29
	135	254	389

During the year £109 7s. was paid to doctors called in by midwives on 70 occasions and during the same period £36 2s. 6d. was recovered from patients.

#### BRIGHTON AND HOVE HOSPITAL FOR WOMEN.

The staff of certified midwives at this Hospital and its branches numbered 9. The Council pays £60 for the salary of one midwife appointed at their suggestion on the 1st May, 1919. The total number of confinements attended was 1,517; of this total 1,151 belonged to Brighton, 350 being primiparae and 801 being multiparae. Antenatal examinations numbered 530. Fifty-two pupils were trained during 1922 all of whom obtained the Certificate of the Central Midwives Board.

In August, 1922, the Hospital moved from West Street to 78, 79 and 80, Buckingham Road. Twelve beds are now set aside for maternity cases. Under the 1918 agreement, 76 patients were admitted during the year 1922; the number of in-patient days was 1,206. The Council paid 6s. a day for a period of a week or more, and 7s. 6d. a day for shorter periods. The total cost was £350 3s. 6d., of which £118 17s. 9d. was paid by the patients.

# NOTIFICATION OF BIRTHS.

(For number notified sec page 42.)

#### HOME VISITS.

Number of infants born during 1922 visited	 		1856
Average number of visits paid to each infant	 		4.6

\*In many cases these visits were primarily to infants under one, the older children in the same family being seen by the Health Visitor at the

same visit.

#### INFANT WELFARE CENTRES (5).

Summary of attendances during 1922:—	
Number of mothers	1728
Total attendances	11,190
Number of infants under one year	1108
Total attendances	8689
Number of children aged 1—5	974
Total attendances	3600
Average number of attendances by each mother	6.48
Average number of attendances by each infant	7.84

Cases of minor ailments, where it appears unlikely that the children will receive treatment otherwise, have been referred from the Infant Welfare Clinics to the School Medical Clinic.

 Cases so referred during 1922 were:—
 —

 Enlarged tonsils and adenoids
 ...
 4

 Eye Disease
 ...
 ...
 ...

 Ear Disease
 ...
 ...
 ...
 ...

 Impetigo
 ...
 ...
 ...
 ...

 Ringworm of the scalp
 ...
 ...
 ...

#### ANTENATAL CLINIC.

The great bulk of antenatal work is done for women who have booked with the Brighton and Hove Hospital for Women, the number of examinations numbering 530. It is a condition of booking that patients are seexamined. Private midwives are invited to send any patient, on Monday mornings, at 10 a.m., to the Dispensary, 7, Gloucester Place, where they are seen by the Infant Welfare Doctor. Last year 33 patients were seen; 3 of these were not pregnant, 30 were pregnant. Of the latter 19 were normal the others suffered from:—

Neuralgia...2 cases.Varicose vcins...3 cases.Contracted pelvis...2 eases.Serious vomiting...1 case.Constipation...1 case.Threatened abortion...1 casc.Pulmonary Phthisis...1 casc.

Eight cases were told that medical treatment was necessary. In each instance the midwife was advised as to diagnosis and treatment.

#### DENTAL CLINIC.

Nursing and expectant mothers and children under five years have been referred to this Clinic from the Infant Welfare and Antenatal Clinics.

Seventy-eight per cent. of the appointments made were kept by the

patients.

During the year 1922, 156 attendances were made by 32 mothers and 16 children under five years of age, on 40 half-day sessions.

Summary of the work done:—

		EXTRA	CTIONS.			DENTURES.		
	FILLINGS.	Nitrous oxide.	Local Anaes- thetic.	Scaling.	Other operations.	Partial.	Com- plete.	
Mothers	39	20	30	42	50	9	3	
Infants	29	10	2	_	44			
Totals	68	30	32	42	94	9	3	

#### EDUCATIONAL WORK.

Three lectures on Infant Welfare Work were given by the Infant Welfare Medical Officer to the students who are training at the Municipal Training College for the profession of teaching, and arrangements were made for all the Students to visit one of the Infant Welfare Centres and see exactly what is being done.

Four lectures were given to the Quccn's Nurses.

The following lectures and demonstrations were given by the Senior Health Visitor:—

To the York Place Evening Schools		14
To the St. John's Ambulance Association		6
To the Women's Co-operative Guild		2
To the Red Cross Society	• • •	2
To the Officers of the Girl Guides (St. Michael's Hall)		4
At the Brighton Technical College		2

#### **CRECHES**

The two crèches are situated in Bristol Road and Wellington Road. At Wellington Road Crèche the average number of children in daily attendance was 27. At Bristol Road the corresponding number was 24.

During the financial year 1921-1922 the Council paid £145 towards the

expenses of the crèches.

#### CHURCH ARMY MATERNITY HOME, FINSBURY ROAD.

Into the above Home 34 expectant and nursing mothers were admitted during the 12 months ended 31st December, 1922. The number of confinements was 28; the average stay prior to confinement was 7 weeks; after confinement, 12 weeks. The cases are usually of persons not belonging to Brighton.

£52 12 2

#### OPHTHALMIA NEONATORUM.

Twelve cases were notified; eight of these were very mild. Six cases were nursed at home by the Queen's Nurses, who paid 247 visits (41.1 visits per case). No case was admitted to the Sanatorium.

In no case did ulceration of the cornea oceur.

Smears of the discharge were taken in 9 cases. Gonococci were not found in any case. (All eases were under treatment when the smears were taken.)

On January 1st, 1921, almost all the midwives practising in Brighton, including those working from the Brighton and Hove Hospital, adopted the practice of the routine instillation of drops of Argyrol (ten per cent. strength) into the eyes of infants at birth, in addition to other routine precautions against Ophthalmia Neonatorum.

In the following table the number of cases of ophthalmia notified each year is shown as a percentage of the births for the same year:—

1914		• • •	19	cases	0.8	per cent.	of ch	ildren	born.
1915				,,			,,		"
1916				,,			,,	,,	2.2
1917	• • •				0.85	,,	,,	"	,,

<sup>\*</sup> The above are not the initials of the doctor or midwife concerned.

#### VENEREAL DISEASE.

#### EDUCATION.

The film, "The End of the Road."—This film was shewn at the Scala Theatre for the fortnight ending March 18th, the then Chairman of the Health Committee (Mr. Councillor R. Major) giving a short address at the opening meeting. Thereafter 41 addresses were given by Mr. H. R. Elliott, an official lecturer of the N.C.C.V.D., for whose services the Council paid. The lecturer reported that the audiences numbered about 11,000.

On April 25th, Dr. Lawson gave a lecture and demonstration on Venereal Diseases to trained nurses and midwives at the V.D. Clinic, Out-Patient Department, Royal Sussex County Hospital (38 were present).

#### TREATMENT AT THE V.D. CLINIC.

Up to February, 1921, the treatment of Venereal Disease was continued in the Out-Patient Department of the Royal Sussex County Hospital. On that date, the new V.D. clinic was opened in a new, self-contained building, erected and fitted out at a cost of £2,747. It is interesting to compare in successive years the number of new cases of syphilis and gonorrhoea dealt with at the clinic.

New Brighton Cases treated at the V.D. Clinic from 1918-22.

Year	Syphilis	Gon.	Soft Sore.	Sy. and S.S.	Sy. and Gon.			Conditions other than V.D.	Total of V.D Cases.
	м. ғ.	M. F.	M. F.	м. ғ.	M. F.	M. F.	м. ғ.	м. ғ.	м. ғ.
1918	49 81	42 37	4 —		4 8			25 34	99 126
1919	92 69	121 36	17 2	3 1	8 7	1 2		84 44	242 117
1920	99 63	93 28	15 3	4 2	13 14	2 —	1 1	83 33	227 111
1921	99 45	101 28	1 1	3 —	6 5	1		82 39	210 80
1922	50 40	78 18	5 1	1 —	4 6		frances frances	79 48	138 65

The totals in the above table show a great reduction in the new cases amongst women attending for treatment. In 1918, before the ending of the war, the new male cases were naturally small in number; they also now show a diminution.

#### SYPHILIS—UNFINISHED COURSES OF TREATMENT.

Of syphilis cases, whilst 21 males and 12 females completed treatment during 1922, in that year 58 males and 26 females ceased to attend during treatment.

Return relating to all persons from all districts who were treated a the Treatment Centre during 1922.

	To	otal	•••	2326
			TT 34 0	

H. M. GALT.

The above return of work done in the Pathological Laboratory is set out in the form required by the Ministry of Health. The specimens examined are set out as coming from either (1) the Treatment Centre: or (2) General Practitioners. The second heading is apt to mislead if it is taken as any guide to the use being made by the practitioner in his own private practice of the facilities provided under the scheme. It is disappointing to have to report that in Brighton only an occasional specimen comes from the private patient of the general practitioner. I set out below a return from which a better judgment can be made as to the source of the specimens than from the official form of the Ministry.

#### Source of V.D. Specimens examined at the Laboratory.

From the V.D. Centre	2157
From Consultants and Specialists in V.D. work from	
patients seen and treated privately	89
From Medical Officers in health services	23
From Hospitals	25
From Homes	8
From ten General Practitioners, four of whom were	
members of Hospital staffs	17

The above figures show that whilst 200 specimens are examined each month, only one or two, .75 per cent., of the whole, are taken by the general practitioner.

That the general practitioner does not see or does not treat syphilis to any extent is strongly evidenced by the fact that no Salvarsan substitute for administration in private practice was applied for except by two V.D. consultant specialists, the latter were supplied with 376 doses of N.A.B.

# SANITARY CIRCUMSTANCES OF THE DISTRICT.

(For General Information see Report, 1919).

#### OUT RELIEF.

The amounts of out relief administered for the years ending 30th September, 1919, 1920, 1921 and 1922 were as follows:—

	1919.	1920.	1921.	1922.
Parish of Brighton	£8690	 £15421	 £30994	 £54577

One summons was issued during the year under the Brighton Improvement Act, 1884, viz.:—

Offence.	Result of Summonses.
Allowing a building to be occupied as a dwelling-house before the drainage thereof had been made and completed and a proper water supply laid on thereto and without a certificate granted by the Borough Surveyor	Fined 20s.

#### COMMON LODGING HOUSES.

Nine of these are at present registered, having accommodation for 317 lodgers, they are seldom fully occupied, except during the time of the races.

The Bye-laws have been properly carried out during the year.

#### HOUSES LET IN LODGINGS.

Fifty-nine of these are now on the register.

The Bye-laws have been properly carried out during the year.

## CONTAGIOUS DISEASES (ANIMALS) ACT.

One outbreak of Parasitie Mange has been notified during the year involving one animal; the usual precautions were taken and no spreading of the disease occurred.

Owing to outbreaks of Foot and Mouth Disease in various parts of the country during the early part of the year, movement of live stock, for a period, was prohibited unless a licence allowing removal was first obtained from the receiving Authority. 850 licenees were issued in connection with the Order.

During the month of February an outbreak of Foot and Mouth Disease occurred at the Public Abattoir, involving two bulloeks. The careases of the affected animals were destroyed, and the Public Abattoir was elosed for two days by order of the Ministry of Agriculture, to enable disinfection of the whole of the premises to be carried out.

One case of Anthrax occurred at the Public Abattoir. The earease was destroyed and the usual precautions taken to prevent spread.

#### HOUSING.

Seven new houses were erceted and completed within the borough during the year. At Moulsecoomb the Council completed 278 houses, during the year making a total of 470.

The number of new houses erected during the years 1914, 1915, 1916, 1917, 1918, 1919, 1920 and 1921 were 44, 20, 7, 1, 5, 0, 30 and 27, respectively.

# THE BRIGHTON CORPORATION (PARADISE STREET AND HEREFORD STREET) IMPROVEMENT SCHEME.

At the Ministry of Health inquiry into the Scheme, on 17th October, held by Edward Leonard, Esq., F.S.I., the Medical Officer of Health gave the following evidence:—

I have been Medical Officer of Health for the County Borough of Brighton since the 1st April, 1908.

On the 15th October, 1919, I presented to the Health Committee of the Town Council an Official Representation regarding an area of 11 acres the Upper Bedford Street area). I represented that most of the houses contained in the area were unfit for human habitation, diseases indicating a general low condition of health prevailed among the population, and that the narrowness, closeness and bad arrangement and the bad condition of the streets and houses within the area, along with the want of light, air and ventilation and other sanitary defects were injurious to the health of the inhabitants of the buildings therein.

In view of the limitation of Government financial assistance in the matter, an Improvement Scheme, comprising the present area only, was made. The present area was chosen because it contained the aggregate of bad property which could most conveniently be dealt with under Part I. of the Housing of the Working Classes Acts.

The area comprised in the Scheme is 1.41 acres in extent, and is bounded on the north in part by No. 25, Upper Bedford Street, and in part by the rear of premises in Eastern Road, on the south by the houses on the south side of Hereford Street, on the east by Upper Bedford Street, and on the west in part by Lavender Street, in part by the Malthouse, in part by the remaining portion of Paradise Street and in part by the rear of No. 38, Lavender Street.

From a study of the plan the closeness and bad arrangement of the houses can be seen. The number of dwelling houses per acre is 10 for Brighton, compared with 35 for the area, or 40 for the area, if the southern half of Hereford Street is excluded. The congestion is added to by the presence of other buildings, covering an area of 171 acres, or \{\frac{1}{8}}\) of the total area.

The density of the population Brighton 53. Area 163.

I would particularly draw attention to (a) 10 dwelling houses and 2 stores on the north side of Paradise Street, nine of these, including the house and any yard present, have a depth of only 25 feet, and three a depth of 29 feet. The width of Paradise Street opposite these 12 properties is under 15 feet. (b) the depth of 23 of the 26 properties on the north side of Hereford Street is only some 20 feet and the whole depth of the two rows of properties forming the south side of Paradise Street and the north side of Hereford Street is only 56 feet. The consequent small size of the

yards, which in many cases are well-like, is one of the outstanding bac features in the area. The yard areas, excluding the W.C. site, have been classified as follows:—

0— 50 square feet—25 dwelling houses.

50—100 ,, ,, —10 ,, ,,

100—200 ,, ,, —10 ,, ,,

107 ,, ,, —1 (a common yard for 2 houses).

142 ,, ,, —1 ( ,, ,, ,, ,, )

The water closets in the area have hopper pans; these are not self cleansing and get fouled and are offensive in the small yards classified above.

The bad condition of the properties.—The properties are old, worn ou and damp. The worn out condition is apparent in the woodwork of floors stairs and window frames, also in the broken plaster of walls and the bossin, of many of the ceilings. The dampness is partially concealed by match boarding in many of the houses. The dampness is due to (a) the structur of the walls, the outside walls being bulged in places and many of the partition walls being composed in part of chalk blocks; (b) the absence in all the properties of damp proof courses; (c) the absence in most of the properties of ventilation under the floor, the joists and even the floor boards of the ground floor resting upon the ground in many case. Apart from the properties being derelict or worn out and damp, the following contribute to the insanitary condition:—

(1) The ground floor of 29 of the houses is anything up to 3 feet below the street pavement level, as shewn in the following table:—

No. of houses.	Depth below pavement.
6 1 4 1 1 2 2 2 2 2 6 4	3ft. 0in. 2ft. 9in. 2ft. 6in. 2ft. 3in. 2ft. 0in. 1ft. 6in. 1ft. 0in. 0ft. 9in. 6—9in. 3—6in.

- (2) 19 are without scullery sinks. Of these, the water tap is situat in the scullery in 10 cases and in the yard in 9 cases. In both, continu wetness of yard or scullery results. The dampness, particularly in t scullery, is detrimental to health.
- (3) The bedrooms arc small; of 114 such rooms (not including bedroom in Nos. 6, 14, and 44 on the reference book, which are empty and derel houses), 33 have a cubic area of less than 500 cubic feet, although it show be mentioned that 6 of these are not at present used as bedrooms. Of t 81 remaining, only 5 contain over 1,000 cubic feet. Owing to the sm size of the rooms, these houses will always provide many cases of overcowding. At present, 20 of the 45 inhabited houses have overcrowd bedrooms. The lack of moving air, owing to the narrowness, closent and bad arrangement of these properties, adds to the bad effects of t smallness and overcrowding of the bedrooms.

- (4) 41 of the bedrooms have no means of ventilation except through the door and the window.
- (5) The absence or the worn out and broken condition of the paving of many of the yards and sculleries.
  - (6) None of the houses have a well-ventilated store for food.

The mortality rates in the small area now under consideration are as follows:—

Death rates for a period of 20 years (1901-20 inclusive).

	Popula- tion.	Deaths in 20 years.	Average annual Death Rates calculated on preceding populations.	Phthisis.	Other Tubercle.	Bronchitis, Pneumonia and Broncho- Pneumonia.	Infectious Diseases.*
Brighton	134800 (1921)	38009	14.1	1.24	.4	2.1	.9
Area	232 (July, 1922)	87	18.7	1.72	.65	3.4	5.0

\*Scarlet Fever, Diphtheria, Measles, Whooping Cough, Typhoid Fever, Diarrhoea.

Infantile mortality (1901-20) Brighton, 104. The area, 176.

The rates to which I attach the greatest importance are :-

- (1) Infantile mortality which, over a period of 20 years, is 176 in the area, as compared with 104 in Brighton as a whole. Infants are extremely susceptible to insanitary conditions, and I know of no other reason for the higher infantile mortality in this area, except the presence of the insanitary conditions on which the petition is based.
- (2) The zymotic death rate is 0.9 in Brighton, as compared with 5.0 in the area. One of the chief factors raising the zymotic death rate in the area is the large number of deaths from measles and its complications. Children affected with measles in damp, insanitary houses readily develop lung complications and die. The very high relative death rate from zymotic diseases is in my opinion, directly due to the insanitary conditions existing in the area.

In my opinion the existing evils can only be met by a general clearance scheme, and would not be remedied by means of closing and/or demolition orders. The Corporation have, in the past, made such orders as regards particular houses, but nothing short of wholesale clearance and re-housing on the site will counteract the unhealthy conditions caused by congestion of the buildings, narrowness of streets, lack of air space and ventilation, and the ruinous, damp and derelict condition of the houses themselves.

#### FOOD.

# PUBLIC ABATTOIR-

The number of animals killed during the year was 33,932, viz. :— 3178 Beasts. 2466 Lambs.

5010 Calves.

14167 Pigs.

9105 Sheep.

6 Goats.

#### MEAT SEIZURES.

A side of Pork affected with tuberculosis and exposed for sale in a butcher's shop was seized. Proceedings were taken against the butcher and a fine of £10 and costs inflicted.

Eleven pieces of unsound meat, exposed for sale in a butcher's shop, were seized. Proceedings were taken against two butchers (partners), who were fined £22 and £5 costs.

Eight ½lb. tins of Sardine Paste in a blown condition and exposed for sale in a grocer's shop were seized. The Grocer was cautioned.

## OTHER FOODS SURRENDERED DURING THE YEAR.

MISCELLANEOUS SAMPLES REPORTED NOT GENUINE :-3 samples of Sponge Cake contained Boric Acid :10%, :11%, :16°

2 samples of Liquid Egg contained Boric Acid .44%, .45%. 8 samples of Chopped Beef Suet contained Ricc Flour 3.3%, 2.9

18.0%, 3.0%, 9.5%, 10.5%, 5.5%, 22.2%.
4 samples of Vinegar deficient in Acetic Acid 22%, 17.5%, 2.5%

2 samples of Baking Powder deficient in Carbon Dioxide, 15 19%.

1 sample of Lime Juiee Cordial contained Salicylic Acid 4.3 grs. per pt. 2 samples of Lemon Squash contained Salicylic Acid 5.2 and 2.8 grs. per pt.

#### OBSERVATIONS.

Total number of samples reported not genuine, 91 or 22.7%.

#### PROCEEDINGS.

Four sellers of cream were fined £5, £5, £2, £2, with costs and analyst's fee, 10s. 6d., respectively, for selling cream as pure cream which contained Boric Acid preservative.

A farmer was fined £8, with costs and analyst's fee, £1, for consigning four churns of milk which were deficient in solids not fat, 4.4%, 8%, 13% and 12.7% respectively.

A coffee-house keeper was fined £1 with eosts and analyst's fee, 5s., for selling a glass of milk which was deficient in fat 4% and deficient in solids not fat, 7.55%.

A grocer was summoned for selling ehopped beef suct which contained 22.2% of rice flour; ease dismissed on payment of 2 guineas costs.

Nine summonses were issued against a farmer for eonsigning nine churns of milk, which were adulterated as follows:—

Sample Deficient in Fat %. Deficient in Solids not Fat %.

,,		• • •	3.0	• • •	• • •	.9
,,	9		4.6			1.0

The above eases were dismissed, the Magistrates being of opinion that the milk was as from the cow.

## SAMPLES OF MILK EXAMINED FOR THE PRESENCE OF TUBERCLE BACILLI.

During the year 1922, 14 samples of milk have been examined at the Lister Institute for the presence of tubercle bacilli. Of these, 2 were found to contain tubercle bacilli.

. In consequence of the positive results, one farm was visited and 20 cows were examined by the Corporation Veterinary Inspector. Three cows were found to be affected with indurated udders and were disposed of for slaughter.

Subsequent to the suspected cows being removed from the herd, samples were obtained from the same source and submitted to examination, these

proved to be negative.

Between the taking of the sample in the second instance and the time elapsing before a positive result was received (thirty days), the farmer had become suspicious of two eows and despatched them to market. In addition, the farmer proposed, and has since obtained, a licenee to sell a "graded" milk, under the Milk (Special Designations) Order of 1922, consequently an inspection of the farm was not considered necessary.

Samples of milk were examined for Bacterial Count, Dirt and Coli.

Sample.	Organisms per C.C. about 16 drops.		2 tubes. Negative	Analyst's Comments.
1	296,000	2	0	Unsatisfactory.
2	2,000	1	1	Fail in 1 coli tube, otherwise satisfactory.

A petition was received from the Butchers, asking that the provisions of the Shops Acts respecting closing on the weekly half-holiday might be extended to their trade, and that their existing Early Closing Order might be revoked and replaced by a new Order, containing a proviso suspending its operation during the seven days preceding a Bank-Holiday.

In consequence of this petition a vote was taken and the necessary

two-thirds majority being obtained the requested Orders were made.

# Annual Report

ON THE

## MEDICAL INSPECTION

AND

## TREATMENT

OF

## SCHOOL CHILDREN

OF THE

County Borough of Brighton

FOR THE YEAR 1922.

BY

DUNCAN FORBES, M.D., B.Sc., D.P.H.,

School Medical Officer.

AND

RUTHERFORD CRAMB, M.B., Ch.B., D.P.H.,

Senior Medical Officer.

#### BRIGHTON:

School Clinic,
59, Grand Parade,
March, 1923.

To the Chairman and Members of the Children's Care Sub-Committee.

## LADIES AND GENTLEMEN,

We beg to present the School Medical Report for the year 1922. The Report deals with the medical inspection and treatment of defects in the scholars attending the Elementary and Secondary Schools under the Local Authority.

We would especially draw attention (1) to the detailed report on the Zine Ionisation treatment for discharging ears; this treatment was introduced during the year under review and the results have been successful, and (2) the special report on the after results of the operation for removal of diseased tonsils and adenoids.

It will be pleasing to observe that the improvement in verminous conditions and in certain skin diseases mentioned in the previous Report, has been fully maintained.

We are, Ladies and Gentlemen,
Your obedient Servants,
DUNCAN FORBES,
RUTHERFORD CRAMB.

## GENERAL STATEMENT OF THE EXTENT AND SCOPE OF MEDICAL INSPECTION DURING 1922.

The resident population of Brighton as estimated by the Registrar

General is 135,000. The area of the district is 2,620 acres.

There are 17 provided schools, including one for mentally defective children, and 14 non-provided schools. In the 31 schools there are 78 departments.

The School accommodation is 19,408. The number of children on the

registers for 1922 was 17,460, and the average attendance 15,487.

## THE SCHOOL MEDICAL STAFF.

The School Medical Staff during the year consisted of the Medical Office of Health acting as School Medical Officer, three School Doctors, two Dentists one giving part-time to Infant Welfare and Maternity work, four nurse The lady Assistant School Doctor commenced duty in and four clerks. Her duties include the medical inspection of girls at the January, 1922. Municipal Secondary School; she also assists in the medical inspection and treatment of the elementary school children.

Co-ordination of the Medical Services.

The methods of co-ordination of the municipal medical services were detailed in the Annual Report for 1920, and during the past year co-ordinatio

was fully maintained.

The Infant Welfare Medical Officer reported to the Senior School Docto 180 children who had been under her care at the Infant Welfare Clinic These reports are on special cards and are attached to the child's medical inspection schedule. As they give a record of health before school age, the are of importance to the school doctor, particularly when examining the chi for the first time at school.

The Medical Officer of Health reported the following defects discovered

or developed in children during their stay in the Fever Hospital:-

or developed in cimar	011 0101111	,			
Enlarged Tonsils and	Adenoids	14	Tuberculosis—		
Otorrhoea		1	Pulmonary	T	• • •
Heart conditions		. 14	Non-pulmonary,	Leg	• • •
Defective vision		. 1	)) ))	Glands	
			Other conditions	• • •	• • •

General.

In January there was an outbreak of influenza, and while its effe were not so severe as in the 1918 epidemic, a large number of children as teachers were affected.

It will be noted with satisfaction that the decrease in numbers of child treated for verminous conditions, scabies and ringworm, reported in 19

has been maintained during the past year.

Lectures on the "School Medical Service and Defects in School Childre" were given by the Senior School Doctor to the students of the Munici Training College and Diocesan Training College, and the students attended in small groups at the School Clinic, where the working of the Cl and demonstrations of the common ailments were given. These lectu are important as the students gain an insight into the work of the Sch Medical Service and they learn how to make the most of the medical serv when they come to have charge of school children.

## Routine Medical Inspection (see Table 1., page 24).

The three Code Groups: Entrants, Intermediates and Leavers, were medically inspected in all the schools. Also children found defective at previous inspections, children in employment and phthisis contacts were examined, the condition of the last group being reported to the Tuberculosis Officer. Specials, i.e., children not included in the Code Groups, but shown at the request of the parent or head teacher, were also inspected. In this way the majority of defective children, apart from the Code Groups, were examined and kept under observation.

In the Code Groups 5,520, including 1,461 entrants, were inspected in 1922 compared with 5,700, including 1,671 entrants, in 1921. The fall of 180 in the totals inspected is entirely accounted for by the drop of 210 in the number of entrants; this fall was foreshadowed in our last annual report and

is accounted for by the low birth rate of 1917.

Findings of Routine Medical Inspection (including Special cases):—

s onewoneys c	of Itomor	ve meu	occi Ins	peccono	(Inclu	umg	pheciai	Cases)	•

<sup>\*</sup>Considered by the School Doctors as urgent: other dental defects are noted by the School Dentists at their inspections.

## Attendance of Parents.

Altogether 2,650 (48 per cent.) parents attended out of 5,520 invited. The attendance of parents was highest in the Infants' departments (69.8 per cent.), in the Girls' (45.2 per cent.), and lowest in the Boys' departments

(30.8 p-r cent.).

The percentage of actual refusals to consent to examination was 2.7 per cent. The number of children absent on the day of inspection was 431, i.e., 7.8 per cent. During the previous year the percentage of actual refusals was 2.4 per cent. and the number of children absent on the day of inspection was 703, i.e., 10.6 per cent. Thus during 1922, the percentage of Code Group children actually examined was 90.4 per cent., while for the previous year it was 87 per cent. Children who are absent on the day of medical inspection are put forward for inspection the following year. In those cases which were not examined and where there seemed a probability of the existence of a defect, the parents were requested to bring the children to the Inspection Clinic for examination.

From the routine medical inspection sixty-two children were referred for examination at the School Clinic.

Children under school age examined.

Several parents brought children for examination who were under school age, these included 15 boys and 14 girls who suffered from the following defects:—

Phimosis, Anaemia, Bronchial Catarrh, Thread Worms, Squint,

Hernia, Impetigo.

#### HEIGHTS AND WEIGHTS.

The following table shews the average height and weight of children classified according to age and sex:—

### The School Clinic.

The arrangements for treating and examining school children at the School Clinic were fully described in the report of 1920. No material change has been made in these arrangements.

During the year, the total number of attendances at the Clinic for all diseases numbered 30,419, of which 28,089 were attendances for treatment.

These attendances were made by 8,289 children.

The following table gives an analysis of the conditions treated during 1922:—

						No. of
				Cases.		Attendances.
Skin Clinie				1832		7573
Ear Clinic				579		9880
Eye Clinic (external	disea	(ses		310		1872
Inspection Clinic				1493		2233
Tonsils and Adenoid						
and X-Rays (P				773		1188
,		• • •		744		1288

Refraction Clinic		• • •	• • • •	445		870
Employment Cases		• • •		97	• • •	97
Dental Clinic		• • •		1953	•••	5355
				8289		30419

The Inspection Clinic still carries out its important function. Many of the cases are referred from the Attendance Sub-Committee, Head Teachers and School Attendance Officers, with a view as to fitness or otherwise for school.

During the year 1,493 children were examined, making 2,233 attendances. An analysis of the cases and defects found is as follows:—

Inspection Clinic.

## Following up.

No change has been made in this important part of the School Medical Service, which was described in the Annual Report for 1920.

#### MEDICAL TREATMENT.

## Enlarged Tonsils and Adenoids.

The arrangements for the operative treatment for enlarged tonsils and adenoids were gone into in full detail in last year's report, and it is satisfactory to note that again no untoward incident has occurred during this year's work.

The number treated was slightly less than last year, 296 being operated on, a reduction of 66.

The statistics for 1922 are as follows:-

261 attended one year after operation; improvement noted.

296 were operated upon.

In 35 the parents refused to allow operation.

In 42 it was decided on re-inspection that operation was unnecessary.

Total 634

## Post-operative Results.

The eustom of seeing eases a year after operation and comparing their condition with their state before operation was carried on during the year, and it is with satisfaction that we are able to report that the results continue to be very gratifying indeed. In many eases the parents themselves have been enthusiastic in their expressions as to the difference the operation has made on the health of their children.

Before operation a eareful summary of the symptoms each child presents is entered on a card. When the child is presented for examination a year after the operation, its condition is noted on the same card, hence a satisfactory comparison can be made. For the year 1921, 362 children were operated upon, and during 1922, 260 of these children came for the year after examination.

The following table shows in tabular form the results of the treatment on the more serious symptoms, in 360 of the eases treated; minor symptoms, e.g., snoring, have been omitted in this table:—

			$_{ m mp}$		seen.	t seen.		Sym	ptoi	ns a	fter	Ope	ratio	on.

Total	360	149	75	52	260	100	98	15	36	47	10	18,	20		

Above figures expressed as percentage:— Deafness, 65.7 per cent. curcd.
Otorrhoea, 62.7 per cent. curcd.
Enuresis, 48 per cent cured.

A study of this table confirms the opinion that the presence of adenoids is a very common cause of deafness and otorrhoea in children, and it has to be remembered that the deafness tends to progress if the condition is left untreated.

## Other conditions affecting the Nose and Ear.

In virtue of the agreement with the Board of the Throat and Ear Hospital, children found by the School Medical Staff to be suffering from diseases or defects of the throat or ear not treated at the School Clinic, or for ear conditions which become acute, are referred to the Hospital for treatment. The charges made by the Hospital are: for operation, 28s.; anaesthetist's fee, 5s.; first day in hospital, 5s.; subsequent days, 2s. 6d.; attendance at out-patient department, 2s. During the year 11 children were referred to the Hospital for treatment, and of these six had operations performed. The total cost to the Committee for this was £51 16s.

## Defective Vision and Squint.

The majority of these defects are found at the routine medical inspections and 367 children were found to have such a defect as required further examination and treatment. In addition to this, if a teacher considers any child has difficulty in reading or seeing the blackboard, the child can be sent to the Clinic for examination. At the routine inspections, all children for whom spectacles have been prescribed as the result of a previous examination, are re-examined to determine whether the spectacles are still suitable or not. During the first part of the year refraction clinics were held on Thursday afternoons and Friday mornings, but during the latter part of the year Wednesday afternoon was added in order to cope with the cases requiring treatment.

The total number of children attending the refraction clinics was 445, making 870 attendances, and of these 419 had spectacles prescribed.

256 children had their spectacles repaired through the agency of the

From an analysis of 419 prescriptions, the following statistics were obtained:—

Hypermetropia	• •		• • •	• • •		138
Hypermetropic astigm	atism		• • •	• • •	• • •	115
Myopia	• •			• • •	• • •	83
Myopic astigmatism		• • •	• • •	• • •	• • •	52
Mixed astigmatism .		• • •	• • •	• • •	• • •	26
Odd Eyes	• •					5

In addition, 12 boys from the Portslade Industrial School had retinoscopy performed, and as a result, 11 had spectacles prescribed.

## External Eye Disease.

These defects are treated at the School Clinic on Monday, Wednesday and Friday afternoons, and where necessary, also on Saturday mornings. In urgent cases, however, they are seen daily. We have continued to supply

Cod Liver Oil in certain eases where it is eonsidered that general treatment is necessary in addition to the local treatment to effect a cure, and the results are satisfactory.

During the year under review 310 children suffering from external eye disease attended the School Clinic, making 1,872 attendances, and of these

220 were discharged as eured.

The following is an analysis of these eases :-

following is an arr	3		Cases.	Attendances.	Discharged.

.Ear Disease.

Children suffering from this defect are treated on Monday, Wednesday and Friday afternoons, but in certain cases daily treatment is given. Otorrhoea was discovered at medical inspection in 138 children out of 5,751 children inspected, i.e., 2.4 per cent. In addition, many cases are reported by the School Nurses and also by the teachers and School Attendance Officers. It is important that children under school age suffering from otorrhoea should have treatment, and arrangements are in force for treating children who attend the Infant Welfare Clinics. During the year six children were referred for treatment by the Infant Welfare Medical Officer.

526 children suffering from discharging ears attended the School Clinic, making 9,802 attendances, and of these 165 were discharged as cured. The corresponding figures for last year were 566 children, making 11,286 attend-

ances, and 95 discharged.

The following is an analysis of the eases:

## Special report on Zine Ionisation treatment for discharging ears.

In the report for 1921 we drew attention to this method of treating ehronic discharging ears, and during the past year this treatment has been systematically earried out. The results have been better than anticipated and have fully justified the necessary expense in obtaining the apparatus.

and the time devoted to the treatment.

At the outset we desire to express our thanks to Dr. Friel, who most kindly showed us the apparatus and technique at the Royal Free Hospital, London, and also the method as applied at the Cable Street School Clinic. He was eareful to point out that zine ionisation was not a "eure all," but suggested that 50 per cent. of children suffering from ear discharge could be eured by its use; that the technique in each case, although not difficult, had to be carried out with minute care, and that the operators had to be prepared for disappointments.

By "Ionisation" we mean the introduction into the tissues of the body by an electric current one of the constituents of a salt in a nascent condition. The salt used for these ear conditions is sulphate of zine (Zn. So4), in a strength of 5 grams of the salt to 1,000 e.e. of water. A quantity of this solution is used diluted with an equal quantity of warm water. This

weak solution is used in order not to irritate delicate tissues.

The electric current, acting on the zinc solution, drives the zinc ions into the tissues, where the zinc coagulates the albumin not only of the tissue cells

but of the bacteria themselves. This coagulation causes the death of the germs hence a cavity such as the middle ear can be rendered sterile. From this it will be readily understood that cases of chronic ear discharge, where the area of suppuration can be reached by the ionising fluid, are rapidly cured. The failures in this treatment are those where there is carious bone, as in mastoid disease, or where there is discharge from the antrum and mastoid cells into the middle ear or where the perforation in the drum of the ear is so minute that the ionising fluid cannot pass through. In cases where there are enlarged tonsils and adenoids, or granulations in the ear, success cannot be expected until these are treated successfully.

The apparatus used at the School Clinic consists of a Leduc Rheostat, a milliampmeter and a special speculum to fit into the meatus of the ear. The rheostat is a simple instrument and consists of two glass vessels, one of which is smaller and fits into the other, and the space between them is filled with water. Resting on the lips of the vessels is a bar of wood and at each end a copper rod perforates this bar and dips into the water between the vessels. Attached to these copper rods are the insulated wires which are connected to the patient. Crossing this bar of wood at right angles is another wooden bar, also perforated by two copper rods dipping into the water and these copper rods are connected by wires to the source of electricity—a plug fitting into an electric lamp socket. When these wooden bars are kept at right angles, no current passes, but by means of a delicate screw the second wooden bar can be turned to approximate the first, when the electric current passes through the patient, the closer the bars are approximated to the parallel the stronger the current.

A milliamperemeter is connected up in the circuit, and hence the amount of current given to the patient can be accurately measured. The special ear speculum consists of a small bar of zinc fitted into a narrow vulcanite speculum which is inserted into the meatus of the ear. This speculum is connected by an insulated wire to the positive

terminal of the rheostat.

The apparatus being fitted up and ready, the patient's affected ear is thoroughly cleaned out, all discharge being removed by syringing or mopping out with swabs. The ear is then douehed out with the ionising fluid, and the patient laid on the couch, lying on his side, the ear to be ionised upwards. The speculum is inserted into the meatus and filled up with the ionising fluid, and any bubbles of air are aspirated out. It is then connected to the positive pole of the rheostat. This constitutes the active electrode. indifferent electrode is obtained by soldering the wire from the negative pole of the apparatus to a piece of sheet tin, this is bandaged to the patient's leg, a towel soaked in salt solution being interposed between the patient's skin and the sheet tin. The current is then gradually increased, the milliampmeter being carefully watched till it registers 3 milliamps. A treatment of 3 milliamps for ten minutes is generally given, but in cases where the child shows any discomfort the current is reduced to 2 milliamps and continued for 15 minutes. When the treatment is finished, the current is reduced very slowly—a sudden cutting off produces giddiness and in some cases vomiting. The ear is not dried out, and the patient is instructed to do nothing to it, not even to wash it, till he is seen a week later.

Each case takes from twenty to twenty-five minutes to treat, but while one patient is lying on the couch, a second can be prepared, the ear cleaned out ready for the speculum and notes taken. As a rule the patient shows, no discomfort, and only in one case had the treatment to be stopped owing to restlessness.

(Of the three uncured cases, in two, one ear was cured; in one neither ear was cured.)

In several cases, whilst the condition was not cured, the parent was

satisfied, as the discharge after treatment was not offensive.

We feel justified in regarding this method of treating discharging ears a success, and a valuable addition to the treatment given at the School Clinic.

In the Appendix to this Report will be found particulars of some of the

cases treated (pages 30-31).

#### Skin Diseases.

The number of children attending the Clinic for the treatment of these diseases—the most of them preventable—shows a considerable reduction on

the corresponding numbers for the previous year.

The total number of all skin diseases was 1,830, making 9,403 attendances, which compares very favourably with 2,123 cases, making 9,937 attendances in 1921—a reduction of 293 cases and 534 attendances. chief reduction is in scabies. This is a highly contagious disease of the skin, which is due to a parasite, the acarus scabiei, the female of which, in order to lay her eggs, burrows in the superficial layers of the skin. This causes intense irritation and itching, which leads to scratching, the scars caused by the scratching in many cases becoming septic. Children with this disease are excluded from school, and at each cleanliness inspection in the schoolsendeavours are made to discover any children showing signs of scabies. This disease is gradually settling down to its pre-war proportions—during the war years it increased to enormous figures by infection from soldiers dis-The cases treated last year numbered 100, which charged or on furlough. is about half the number treated in 1921.

The number of children who were treated for ringworm also shows a

reduction, there being 56 fewer cases of ringworm of the scalp.

Impetigo of the scalp shows a reduction of 70 cases; this, no doubt is a result of the improvement in the number of children suffering from verminous conditions.

The following table shows the diseases treated for this year and for 1921:

Treatment Clinic for Diseases of the Skin.

Ringworm of the Scalp.

During the year 63 children were treated by X-Rays for this condition. In 61 cases, all five areas were exposed to the X-Rays; in two cases, only one area was exposed. In addition, two children became so restless and

excitable that the treatment was stopped.

In one of the Homes for Children there was an outbreak of ringworm and 15 cases were treated; five of these were on no school roll but were treated so that they might not become a source of infection to those attending school. It will be of interest to record that one other child in this Home who was on the list for treatment was not treated, as the mother objected, and eventually removed the child from the Home. About a week later this child was admitted to the Children's Hospital and died there from meningitis. We report this as we have no doubt that had X-Ray treatment been carried out as was intended, nothing would have persuaded the parent that the meningitis was not a direct result of X-Rays.

The total number of children who have been treated since the apparatus was installed is now 500, and it is satisfactory to note that no bad results have been recorded. Cases are only discharged when a complete re-growth of hair has taken place, and it is interesting to note that the new hair in the majority of cases is very abundant, silky and inclined to curl. This gives

intense satisfaction to the parents.

After the actual treatment, the child attends once a week at the School Clinic, and the head is treated by the nurse, and shedding of the hair encouraged till it is completed. Since this routine was introduced much improvement has been observed, as in many cases formerly the head was neglected. The child is also seen by the doctor a month after the application of the X-Rays, the condition noted, and it is seen monthly till the hair has re-grown.

Children suffering from ringworm of the scalp are allowed to attend school, provided the affected area can be suitably covered by a cotton cap. These cases are examined by the nurses at their school visits and reported on. As many of these children have the disease for months, and in some cases

years, attendance at school is not lost.

Supervision of Ringworm Cases and Contacts.

The School Nurses have a list of all children in their schools who suffer from ringworm of the scalp, and these children are examined at each school visit to ascertain if they wear their caps and also receive treatment. When during their visits a new case is discovered, the child is sent to the Clinic for the diagnosis to be confirmed; in suspicious cases specimen hairs are examined microscopically. When the diagnosis is confirmed, contacts, i.e., children of the same family, or children living in the same house, are visited by the nurse and examined. We have always been of opinion that ringworm, especially of the scalp, is a disease which spreads to other children of the same family or living in the same house, and the results obtained by the examination of contacts confirm this.

During the past year we continued the examination of home contacts,

with the following results:—

Out of 181 contacts in the house, no less than 59 were found suffering from ringworm of the sealp, *i.e.*, at least one out of every three. As might be expected, the probabilities of acquiring the disease are less when the child although living in the same house, does not belong to the same family.

It will be seen that 18 of the 59 infected contacts were below school age

and not in attendance at school.

Number of first cases in family or house investigated, 102.

## Verminous Conditions.

During the year under review the staff of school nurses has been complete and there has been no change in the staff for the past two years. The campaign against verminous conditions has been carried out as in previous years and it is pleasing to report that the results are encouraging.

The number of children who attended the School Clinic during the year for verminous conditions was 744, making 1,288 attendances. This is a considerable reduction from 1921, when 1,129 children attended, making 2,531 attendances. It should be taken into consideration, however, that during January and the beginning of February, the attendances at the Clinic were not encouraged, owing to the numbers who had influenza.

The special soap mentioned last year is still used and recommended for the cleansing of heads, and special combs are also used and parents are

advised and instructed in their proper use.

The number of prosecutions under the Attendance Bye-Laws during 1922 was 14; in 4 instances a fine 5s., in 1 a fine of 7s. 6d., in 2 a fine of 10s. in 3 a fine of 20s., was inflicted, and the remaining 4 cases were withdrawn

#### School Nurses.

The schools are divided into three districts, and one nurse is allotted t each district. In each district the eleaner schools are visited once in three weeks, the other schools twice in three weeks.

The following table shows the result of their visits to the schools:

s of . dien.

No. of
ninations
ive Child
3013
520
366
39
336
1274
1

The number of visits to school departments, 465.

In addition, the school nurses play a large part in the following up of defective children, as was described in a previous annual report. They also visit at the homes and examine ringworm contacts, and also visit children on the day following operation for tonsils and adenoids.

During the year the school nurses made 208 departmental visits, and

1,991 home visits for treatment, etc.

Two nurses are in attendance at the Clinic in the afternoons for the treatment of minor ailments.

## Education of Mentally Defective Children.

The Special School for Mentally Defective Children is situated in Hollingdean Road. The premises, which were described last year, are admirably suited for the purpose. The general heatlh of the children has improved considerably as the classrooms are large and airy, and full advantage is taken of the playground accommodation. The children are taken to the Moulsecoomb Playing Centre once a week and games are played. Physical exercises are taken in the playground, and when the weather is inclement, in the hall.

The Senior School Doctor, who is also Medical Officer to the School, The children have an annual medical inspection, and

their mental condition is also examined once a year.

The accommodation of the school is 60; the average number on the roll

for 1922 was 60.2; the average attendance being 52.63.

Attending January, 1922			60
Admitted during 1922	• • • •	• • •	15
Left during 1922	• • •		10
Attending December, 1922			-65

The record of the children who have left the school during 1922 is as follows:—

Boys.—One left in July, 1922, and was re-admitted in December, 1922. (Was ill with emphysema).

Two placed under guardianship.

Two left the district. One working with uncle.

Girls.—Two placed under guardianship. Two at home.

## Industrial Class.

This class for mental defectives is run on the lines of an Occupation Centre by the Guardianship Society, at their offices in Grand Parade. The class is now held daily, in the mornings, but on Fridays it is also held in the afternoon.

The class is conducted by a nurse employed for the purpose by the Guardianship Society, a lady assistant and one of the Special School teachers attends after school hours. In addition, an Instructor in boot-repairing attends twice weekly. Rug-making, needlework, knitting, bead-threading

and drawing are taught.

The number on the roll is 30, and there is an average attendance of about 24. Many of these are children who have been discharged from the Special School and who have been placed under supervision in their own homes. This class is of great value as it allows of the provision of care, discipline and some instruction for those children whose mental condition is such that they are regarded as ineducable at, and whose presence is undesirable in, the Special School and for whom institutional treatment is not advisable.

At present there are eight children—3 boys and 5 girls—who are ineducable attending this class. The mental state of children of this type is so evident that their parents fully realise their condition, and bring them to the School Clinic with a view to examination for admission to the Special School.

It is rather a difficult task to turn them away and say they are not suitable and are ineducable, and hence it is a great relief to be able to suggest

this class and the parents feel that something is being done.

The cost of running this Industrial Class is entirely borne by the Guardianship Society at present, but we understand that the Ministry of Health are considering the giving of grants to help these classes. They are, in our opinion, of great value and deserve encouragement.

#### Backward Class.

At Pelham Street Boys' School a mixed class is held for backward children, the number on the roll being 23.

## Blind, Deaf, Defective and Epileptic Children (Act, 1921).

Defective ehildren, coming under the above headings are brought to the notice of the Medical Staff by the Head Teachers, either at Medical Inspections, or by reporting to the School Clinic. Cases are also reported by the School Attendance Officers and the Social Service Centre. The parents of these children are given appointments and invited to attend the Clinic for examination. A certain number of markedly defective children are maintained in residential institutions by the Education Committee.

## Provision of Meals.

As in the previous year, the economic circumstances of many families were such that relief was granted by the Board of Guardians, and meals under this Act were not provided by the Education Authority. In some cases of malnutrition, milk was provided during the morning session.

## Open-air Education.

There are no day open-air schools or residential open-air schools as such under the Local Authority. Playground classes, depending on the state of the weather, were held by 38 school departments. This does not include physical exercise classes, many of which are held in the playgrounds. School journeys were held by 42 departments.

## Employment of Children and Young Persons.

Education Act, 1921, Sec. 92 (1) "A child under the age of twelve shall not be employed . . . . (2) A child under the age of fourteen shall not be employed (a) in street trading; (b) to lift, carry or move anything as to be likely to cause injury to the child; (c) in any occupation likely to be injurious to his life, limb, health or education, regard being had to his physical condition." The school medical staff are called upon to adjudicate as to (b) and (c).

Under the Bye-Laws for the employment of school children, the hours of such

employment are limited to the following:—
On school days, two hours between 5 p.m. and 8 p.m.; on Sundays, two hours between 7.30 a.m. and 10 a.m.; on Saturdays and school holidays, four hours between 7.15 a.m. and 1 p.m. or between 5 and 8 p.m. A child between 13 and 14 years of age may be employed before school for not more than one hour, viz., between 7.15 a.m. and 8.15 a.m. for the sale or delivery of milk or newspaper viz., provided he receives a medical certificate from the School Medical Officer that such employment will not be prejudicial to his health and development, and such child shall only be employed after school hours for not more than one hour, ending not later than 7 p.m. During the year 97 children were examined for certificates of fitness for employment.

At the medical inspections in the schools, children who are employed are examined by the school doctors. A report giving the nature of the employment, the employer's name, the hours worked and the effect on the child from the teacher's standpoint, is submitted to the doctor by the head teacher. Where the work appears to be harming the child, the parent is requested to attend at the School Clinic, and advice as to discon-

tinuance of the employment, or otherwise, is given.

The following table gives the numbers and ages of employed children who were examined by the School Medical Staff at the schools:—

1			Ye	ears			
	9	10	11	12	13	14	Total.
Boys Girls	5 4	18 7	20 12	67 14	153	<u>29</u>	292 56

### \* LICENCES FOR CHILDREN TO TAKE PART IN ENTERTAINMENTS.

Number of children who performed at theatres under licences issued by various local education authorities... ...

Two lists of children who were employed in shops or other labour were received rom the head teachers under the control of the Committee, and were sent in in January

<sup>\* (</sup>From a report of the Inspector of Children in Employment).

and September. The following table gives the number of children reported to be employed during 1922. The figures for 1920 and 1921 are also given:—

January, 1922.			Total No. employed during 1922.	Total No. employed during 1921.	Total No. employed during 1920.	
Boys 332	Boys 347	Boys 107	Boys 572	Boys 650	Boys 1123	
Girls 58	Girls 74	Girls 17	Girls 115	Girls 117	Girls 178	

25 boys were licensed to engage in street trading during 1922. (In 1921, 44 boys were licensed).

### Juvenile Employment.

Close co-ordination exists between the Juvenile Employment Bureau and the Medical Department. (See report for 1921).

In all, 1844 Juvenile Employment cards were sent to the School Clinic for the medical report to be filled in and of these 46 (23 boys and 23 girls) had special reports written regarding suitable occupation.

The defects were as follows:—Tuberculosis of lungs, 3; other tuberculosis, 13 including 4 cripples suffering from tuberculous disease of hip; heart conditions, 14; nervous disorders, 5; cripplings following infantile paralysis, 5; others, 6.

## Co-operation with Teachers.

This was described fully in the Annual Report for 1920. We have again to record our thanks to the teachers for their help and assistance at the medical inspections, and also for their influence in persuading the parents and children to obtain the necessary treatment.

## Co-operation with School Attendance Officers.

The School Attendance Department refers to the School Clinic the names of children who are absent, and for whom no medical certificate has been obtained. These cases are examined and their fitness or unfitness for school is reported. Assistance is also rendered in promoting the attendance at the Clinic of defaulting children. Exceptional children are also reported.

#### DIPHTHERIA.

One hundred and thirty-one children contacts with diphtheria in their own homes were swabbed before their return to school; of these, 12 or 9.2 per cent. gave positive results, 39 recovered diphtheria patients were similarly swabbed immediately before the date fixed for their return to school and four or 10.3 per cent. gave positive results.

#### PHYSICAL TRAINING.

The following notes are taken from a report by Mr. Watters, th Organiser of Physical Training:—

Boys' and Girls' Departments.—In spite of the unsettled weather, which frequent! interrupted the physical training lessons out-of-doors, satisfactory progress was macin a large percentage of the classes. There were eases, however, where the result were disappointing, and it was felt that more frequent reference to the syllabus might

have raised the standard of work considerably. Excellent results were obtained where the team system was taught, but this method might have been more generally adopted.

In the Infants' Departments the work was, on the whole, on a much higher level

than in the previous year.

Swimming.—572 children passed the ten yards' test, against 506 in 1921.

At North Road Bath great difficulty was experienced in finding accommodation for all the classes, and it was found necessary to admit two classes at each period. The disadvantages of this overcrowding were only too obvious and it is hoped that the Town Council will grant the use of the Bath for an additional half-day during the coming season to obviate the difficulties of teaching under very trying conditions. This, and the shortness of the previous season, might to some extent have accounted

for the comparatively small number of children who passed the ten yards' test.

Swimming Clubs.—The increasing popularity of swimming may be estimated by the fact that at the beginning of the season 32 applications for school swimming.

clubs, against 14 in 1920 and 25 in 1921.

Organised Games.—During 1922 efforts were centred chiefly in the development of field games for girls. The enthusiasm for the simple games taught during the physical training lesson showed the necessity for providing facilities for team games

of a more advanced nature.

Stool-ball and net-ball were played by a number of schools, but prior to 1921 no apparatus of any kind was provided at the Parks. This deficiency was made good by the Committee and full advantage was taken of the facilities provided. These games are now well established in a good number of Girls' Departments, and more apparatus is being made in anticipation of further developments.

Valuable assistance was given with the teaching of net-ball at Queen's Park by

the students from the Municipal Training College.

The organisation of games in the Boys' Departments was, on the whole, very

satisfactory.

The football arrangements at Moulsecoomb were greatly simplified by the use of iron-shod scout poles, painted in various colours, in place of full-sized goal posts. The pitches were marked by flags corresponding in colour with the goal posts. This method allowed the pitches to be changed more frequently and prevented hard wear on certain parts of the field.

Every effort was made to economise in buying games equipment. Kit bags, costing 2s. 11d., were supplied for cricket apparatus, in place of cricket bags, bought at 25s. to 30s. Net-ball posts were bought locally at £1 per set, against £4 to £4 10s.

quoted by the manufacturers of games equipment.

#### SECONDARY SCHOOLS.

Routine medical inspection was carried out in the Secondary Schools in accordance with the Act. This was the third year of medical inspection, and, as in the previous years, the arrangements worked smoothly. respective Principals gave much help and rendered every facility.

The Girls' Department was examined by Dr. Elsie Stansfeld.

The number of pupils attending the Secondary Schools are Boys 620, Girls 454, and at the medical inspection 330 boys and 255 girls were examined. Two special cases were also examined, and re-examinations of those found defective at the previous medical inspection, viz., 41 boys, 27 girls. The number of parents who refused medical inspection of their children was 41—29 boys and 12 girls; in the previous year the number of refusals was 16—6 boys and 10 girls.

The following table gives the numbers falling in the various age groups :--

Age.	$\frac{1913}{9}$	1912	1911	1910	$\frac{1909}{13}$	1908 14		$\frac{1906}{16}$	1905	$\frac{1904}{18}$	Total.	Special Cases.	Re- examin- ations.	Grand Total.
Boys Girls	$\frac{3}{12}$	19 13	38 28	37 30	98 51	5 5	103 82	4 2	18 21	5 11	330 255		41 27	$\begin{array}{ c c c c c c c c c c c c c c c c c c c$
	15	32	66	67	149	10	185	6	39	16	585	2	68	655

The following table gives in statistical form the findings of medical inspection:—

		Box	zs.		Girls.				
	Rou- tine.	Spe- cial.	Total	Per- cent- age.	Rou- tine.	Spe- cial.	Total	Per- cent- agc.	
No. inspected	330	_	330	53.2	255		255	56.0	
No. defective requiring Treatment	53		53	16.06	66	_	66	25.8	
No. to be kept under observation	36		36	1.9	25		25	9.8	

It is again with pleasure we report that the general health of the pupils in both departments reached a high standard. It is the usual custom in Reports to record the numbers with defective teeth, but we desire here to record those with perfect teeth, or, with teeth rendered sound by dental treatment. In the Boys' School, 330 boys were examined, and of these 175, or 53 per cent., had sound or perfect teeth; in the Girls' Department, of the 255 examined, 132, or 51 per cent., had sound or perfect teeth. It is important to record these figures, as many of the pupils have proceeded from the elementary schools and had been under dental treatment at the School Clinic.

# Statement of defects requiring treatment or to be kept under observation

	Boys.	Girls.	Total.	Percentage.
Enlarged tonsils and adenoids Skin disease External eye disease Defective vision and Squint Ear disease and defective hearing	17 — 37 4	1 24 1 12	17 1 61 5 15	2.9 .17 
Dental disease Deformities (including Scoliosis, Kyphosis and other forms) Anaemia Heart Conditions	3 13 9 5	45 4 12	58 13 17	9.9 2.2 2.9

### Deformities.

Attention must be paid to the number of pupils who presented som type of deformity, e.g. lateral eurvature of the spine, round shoulder or a combination of these. The numbers so affected were 58, of whice 45 were in the Girls' Department. Special attention was drawn to these with regard to posture in class and observation at drill. In the Girls Department, many of the cases presented lateral curvature of the spin in a moderate degree, which could be corrected by the proper remediate treatment, but, if neglected, will progress to the marked and serious typ. The remedial exercises could be carried out in the school and we would suggest that this should receive consideration.

### Treatment of Defects.

The following tables show the treatment carried out during 1922 those defects discovered at the medical inspection in the previous year:

### Treatment of Visual Defect.

suspect	ed				11
Non-Pulmonary					22
Disease of the Nervous System	•••	• • •	• • •	• • •	86
Deformities		• • •	• • •	•••	351
Other defects and diseases	• • •	• • •	• • •	• • •	207
(4). The number of children in (1) who we (excluding uncleanliness, defective cloth	re referr	ed for	treatm	nent	1715
(5). The number of children in (4) who received defects (excluding uncleanliness, defect	l treatme ve clothi	nt for ong, &c.	one or n	nore	937

#### APPENDIX.

The following are some typical cases treated by Zinc Ionisation and the results:

Patient	Age.	Duration of discharge and ear affected.	Date. 1922.	Treatment. Result.
Н. А.	121/2	Left. 3 yrs.	31st Oct. 9th Nov 17th Nov.	Zinc Ion. 3 m.a. 10 mins. Ear dry. No discharge Ear dry. No discharge
V. B.	11175	Left, 2 yrs.	19th Oct. 26th Oct. 30th Oct.	Zinc Ion. 2 m.a. 12 mins.  Ear dry. Membrane healthy No discharge.
Н. В.	10½	Right and left 5 years.	22nd Mar. 3rd Apl. 11th May 22nd June 31st June. 20th Sept. 10th Oct. 17th Oct. 30th Oct.	Lt. ear. Zinc Ion. 3 m.a.  10 mins.  Sl. discharge, not offensive now.  Zinc Ion. 3 m.a. 10 mins.  No discharge. Rt. ear.  Zinc. Ion. 3 m.a. 10 mins  Rt. ear. sl. discharge.  pulv. boracic.  Lt. ear. no discharge still  present. Lt. ear dry.  Rt. ear. Zinc Ion. 3 m.a.  10 mins.  Rt. car, No discharge.  Rt. ear. No discharge.  Lt. ear. No discharge.  Lt. ear. No discharge.
S. B.	13	Left "since infancy." (granulations).	12th Apl. 25th Apl. 9th May.	Zinc Ion. 3 m.a. 10 mins.  Ear dry. bleeds easily. pulv. borac. No. discharge. membrane healthy.
Е. В.	10	Right, last 3 years (commenced in infancy, then stopped).	17th Oct. 26th Oct. 6th Nov.	Rt. ear, Zinc Ion. 3 m.a. 10 mins. Ear dry. No discharge.  No discharge.
P. C.	1212	Right and left. 18 months.	7th Dec. 14th Dec. 20th Dec.	Rt. ear. Zinc Ion. 3 m.a. 12 mins. Rt. ear. No discharge. Lt. ear. Zinc Ion. 3 m.a. 10 mins. Rt. car dry, no discharge. Lt. ear. dry, no discharge.
J. C.	14	Right. 2 yrs.	31st Oct. 8th Nov. 17th Nov.	Zinc. Ion., 3 m.a. 10 mins. Ear dry. No discharge. Membrane healthy. No discharge.
T. C.	6	Right and left, 3 years.	2nd Nov. 9th Nov. 17th Nov.	Right. Zinc Ion. 2.5 m.a.  10 mins. Left. Zinc Ion. 2.5 m.a. 10 mins. Both ears dry. No discharge. Both ears dry. No discharge.

# APPENDIX—continued.

Patient	Age.	Duration of discharge and ear affected.	Date. 1922.	Treatment.	Result.
H. C.	13	Left, "since infancy."	14th Nov. 23rd Nov. 4th Dec.	Zinc Ion. 3 m.a. 10 mins.  Ear dry. No discharge.  Ear dry. No discharge.	Cured.
K. C.	10 ½	Right. 2 yrs.	8th Mar. 20th Mar. 29thM ar. 1st May	Zinc. Ion. 3 m.a. 10 mins. Ear dry for 6 days; now slight discharge. Zinc. Ion. 3 m.a. 10 mins. No discharge. No discharge.	Cured.
<b>E.</b> C.	8	Left. 2 yrs.	21st Sept. 2nd Oct.	Zinc. Ion. 3 m.a. 10 mins. Ear dry. No discharge.	Cured.
